TFG HELPS MICHIGAN COMMUNITY LAUNCH FIRST-EVER WIND POWER PROJECT ON AN URBAN BROWNFIELD

FOR IMMEDIATE RELEASE: October 18, 2006

The City of Wyandotte, Michigan was featured on national television on October 15 for its initiatives to use cleaner, renewable energy sources to power its community. This initiative includes a project to install wind power generation on a formerly contaminated brownfield on the Detroit River, and a project to burn recycled tires for lower-emissions electricity generation. The Ferguson Group helped Wyandotte on these projects by obtaining Department of Energy funding, partnerships with stakeholders, and environmental regulatory approvals for these efforts. We are proud that our innovative clients are being nationally recognized for their clean technology endeavors.
